M Ruffini-Castiglione (Italy). Cytophotometric investigation on DNA and nuclear protein and pattern of DNA methylation in early abscission-affected fruits of *Malus domestica* Borkh ... 193-203
INDICE / INDEX, vol. 57 (1995) ... 205-206

Revista Internacional de BOTANICA EXPERIMENTAL **ΦYTON** International Journal of EXPERIMENTAL BOTANY

Fundada en 1951 por Miguel Raggio & Nora Moro-Raggio
Founded 1951 by Miguel Raggio, Editor

INSTRUCTIONS FOR CONTRIBUTORS

Submission of a manuscript involves the tacit assurance that it is original and that no similar paper, other than an abstract, has been or will be submitted for publication elsewhere; publication of a preliminary report makes a paper unacceptable.

Papers may be written in Spanish, English, French, Portuguese, German or Italian. ΦYTON conforms in general to the Council of Biology Editors, Committee on Form and Style, 1978, *CBE Style Manual,* 4th Ed., American Institute of Biological Sciences, Washington, D.C., U.S.A. Approximately two double-spaced typewritten pages (pica type) equal one page of printed type or approximately 600 words. The complete botanical name (genus, species, and authority for the binomial) of all experimental plants should be included under "Materials & Methods" and "Abstract". In place of unwieldy chemical names, their widely-used abbreviations should be employed: ATP, 2, 4-D. If several abbreviated forms are used, define them all (in the order of their appearance in the paper) where the first abbreviation is introduced. Avoid footnotes in the body of the text. Use metric system only.

Use bond paper (21.6 x 28 cm). Consult issues of ΦYTON starting with Vol. 50 for placement of main headings, subheadings and paragraph headings. Indicate in the margin the approximate location in the text of the figures and tables. Arrange manuscript in this order: 1) Title of article; author(s); footnote indicating source of financial support, where work was done, changes of address, and acknowledgments; 2) Abstracts (not more than 3 to 4% of the length of the paper); 3) Text; 4) Literature cited; 5) Legends for figures, 6) Tables, 7) Figures with legends attached so as to be reproducible photographically as a whole. Number all pages consecutively (including tables and legends). Spell out all numbers or fractions which begin a sentence, or better still, avoid beginning a sentence with a numeral. Use "to" between numerals, except in tables and figures. Use decimals instead of fractions. Follow *Symbols and Abbreviations Commonly Used in Plant Physiology,* Plant Physiol. 67 (1981).

For literature cited use: 1) *Journal articles:* Author AB, BB Author, ΦYTON 40 (1981) 159; 2) *Book articles:* Author AB, BB Author. *In* A Smith, B Jones, eds, Title of Book. Ed 2 Vol 3 Chap 4. Publisher, City (1977), p 14; 3) *Theses:* Author BC, Title of Thesis. PhD Thesis, Univesity, City (1979); 4) *No authors or eds:* Title of booklet, pamphlet, etc. Publisher or Company, City (1965). For abbreviations of journal titles, use the BIOSIS *List of Serials.* List literature alphabetically by first author's last name. Unpublished data, personal communications, and articles in preparation should be referred to only parenthetically in the text. An article is properly referred to as "in press" if it has been accepted for publication, ans as such may be included in the "Literature Cited".

Set up **tables** consistent with recent issues of ΦYTON. Number tables consecutively in Roman numerals. Tables should have legends which make their general meaning comprehensible without reference to the text. Conditions specific to the particular experiment should be stated. Reference to the text for general experimental methods is permissible. Tables should be preplanned to fit or be reduced photographically to 10.5 or 5 cm in width by not more than 17.5 cm in length (legends included); or to 17.5 cm in width by not more than 10.5 cm in length, if rotated 90°. Avoid rotation if possible. Give the proper number of significant figures, and for decimals smaller than 1, insert a zero before the point: 0.981.

For manuscript review, **illustrations** which have been reproduced by economical copy methods are acceptable, but one set of good-quality glossy prints must be submitted. Plan ahead for clear, legible illustrations. Line drawings should be intensely black on white; halftones should have good contrast and be in sharp focus throughout. Generally, box the top and right side of graphs by lines of the same weight as the abscissa and ordinate. Illustrations will be fitted into 10.5 or 5 cm widths (17.5 cm for those rotated 90°). Grouping will be done by the Editor. Place figure number *inside* the figure itself whenever possible; legends should be attached so that the whole figure may be reproduced photographically.

Every paper is read and criticized by at least one reviewer familiar with the field of research covered by the paper. Authors are responsible for proofreading the page proofs.

Authors are required to defray in advance the publication costs and should indicate their willingness when submitting the paper. Charges are based on a u$s 75.- fee per printed page or part there of, but may be higher depending on other technical factors. Authors will be billed for all changes from the manuscript made in the page proofs. Fifty (50) reprints are furnished free of charge; further copies may be obtained at cost price if ordered when the paper is submitted. The Journal's responsibility ceases upon release of the reprints to the postal authorities, although it will furnish authors with the registered mail receipt so that they may make their own inquiries regarding delayed or lost packages.

The Editor will appreciate knowing in advance the intention of authors to submit papers. The editorial office will be closed during June, July and August every year, and receipt of manuscripts will not be acknowledged during those months. Please use registered air mail always.

No exceptions of any sort will be considered.
